Introduction and motivation

- what is twitter?
- why should we care?
- examples and case studies
- sound practices
- closing thoughts

What is twitter?

- Twitter is a networking service where users can post highly constrained short updates (called “tweets”)
- Approximately 6,000 tweets per second, 500 million per day
- Tweets can contain text, images, links, and/or hashtags
- Hashtags can reference subjects such as #JSM2019 or #DataScience
- Tweets can ‘tag’ other twitter users (such as @hadleywickham, @visnut, or @NateSilver538).
- Great creativity can be found in constraints: limited to 280 characters (was formerly 140)
- Twitter makes money (or loses less of it) by selling targeted ads

Important shift in the clinical literature. **@NEJM** releases new guidelines for statistical reporting of p-values. nejm.org/doi/full/10.10...

The NEW ENGLAND
JOURNAL of MEDICINE

EDITORIAL

New Guidelines for Statistical Reporting in the Journal

David Harrington, Ph.D., Ralph B. D'Agostino, Sr., Ph.D., Constantine Gatsonis, Ph.D., Joseph W. Hogan, Sc.D., David J. Hunter, M.B., B.S., M.P.H., Sc.D., Sharon-Lise T. Normand, Ph.D., Jeffrey M. Drazen, M.D., and Mary Beth Hamel, M.D., M.P.H

The Journal's revised policies on P values rest on three premises: it is important to adhere to a prespecified analysis plan if one exists; the use of statistical thresholds for claiming an effect or association should be limited to analyses for which the analysis plan outlined a method for controlling type I error; and the evidence about the benefits and harms of a treatment or exposure should include both point estimates and their margins of error.

Looking up a p-value in a table seems a waste of time. I've never done that outside of a stat class, ever.

11

Joe Blitzstein @stat110 · Jul 13

Replying to [@askdrstats](#) @BaumerBen and 9 others

Less: ways of computing p-values, hypothesis testing, fuss over whether to divide by n or $n-1$ in sample var, tedious calculations

More: thinking about data quality, sampling, likelihood, bias-variance tradeoff, simulation, visualization, discussion of common misconceptions

Using Twitter for Education: Mark Ferris

With Twitter, Statistics 101 Takes Flight

By *Mark E. Ferris* | APRIL 20, 2015

What do Katy Perry, LeBron James, the terrorist group known as ISIS, Pope Francis, and the students in my introductory course on business statistics have in common? All are Twitter users.

Katy Perry has over 67 million followers, while my statistics students are barely out of single digits. Yet their goal is the same: to share their interests and establish their "brand" in 140-character bites.

Much like a museum that carefully chooses its exhibits and preserves its collections, Twitter users also have a curating role, choosing what to share and establishing a presence through their tweets and followers. Many Twitter users also take on educational missions, producing news, reporting on research, and attempting to influence the conversations of the day through their arguments and supporting evidence. With that latter goal in mind, in 2013 I began requiring my students in introductory statistics to engage with the Twittersphere.

Using Twitter for Education: Tang and Hew (Computers and Education, 2017)

- ① Provide information and technological training sessions, as well as interaction opportunities prior to class
- ② Provide clear description of Twitter-related educational activities
- ③ Consider making Twitter mandatory
- ④ Provide regular academic and personal support
- ⑤ Provide access to broader learning communities

Using social media for outreach and advocacy

- **Connecting** with partners and allies
- Offering **useful information and new ideas**
- **Drawing attention** to your issues
- Being **transparent** about who you are
- **Avoiding jargon**

See more at the Union of Concerned Scientists website

Other recommended practices

Great list curated by Hootsuite (<https://blog.hootsuite.com/how-to-get-twitter-followers/>)

- ① pin your best tweet
- ② perfect your bio
- ③ have a human face
- ④ leverage other feeds
- ⑤ embed tweets in your blog
- ⑥ tweet consistently
- ⑦ follow people
- ⑧ ask good questions
- ⑨ be generous

Closing thoughts

- Statistics and data science play integral roles in our society
- With this increased interest, statisticians have a rich opportunity and responsibility to communicate with and educate the public about the power and potential of our discipline
- Social media has the potential to augment and complement other outreach efforts for individuals and organizations

Blogging and tweeting checklist (Sciencemag.org)

- Is my research solid?
- Is the broad dissemination of my results under any restrictions?
- Is my writing accurate and sufficiently substantiated?
- Did I reach out to collaborators or the authors before writing about their work?
- Have I differentiated my own comments from those of the speaker or author?
- Are my comments likely to offend anyone?
- Have I obtained copyright permission to reproduce content?
